# ABOUT OPPO MEDICAL

Established in Seattle Washington in 1997, OPPO MEDICAL has built a powerful network of affiliate companies in America and Asia, and has more than 70 distributors worldwide. We offer the most extensive product line of functional supports with:

- Long standing commitment to uncompromising quality in workmanship and customer service.
- Keep understanding of the rehabilitation market and the needs of our customers.
- Passion for innovation, shared by a team of highly-motivated and talented employees.
- Powerful network of affiliate companies and factories in the US, Spain, Taiwan and China, positioned to serve you, our distributors, whether you are in North America, South America, Central America, Europe, Asia, Middle East or Africa.

We continue to use technology to streamline manufacturing processes and to foster networking communication for our distributors worldwide. We are expanding the frontiers of orthopaedic medicine with innovative materials and designs, and a holistic approach to wellness.

# SUPPORT LEVELS

Classification for the degree of support for each product

## PREVENTIVE

Preventive supports, made of flexible fabric or breathable neoprene, help relieve pain and provide some support for movement of affected joints. These supports offer balanced compression on injured joint, muscles, and ligaments for prevention of recurrent injuries.

## ESSENTIAL

Essential supports, with functional accessories, aim to help injured joints or tissues to move smoothly. They are recommended for chronic orthopaedic diseases to protect against sustained, debilitating injuries and reduce strain on joints or surrounding soft tissues.

## FUNCTIONAL

Functional braces work to correct joint tracking or movement. They are recommended for moderate to serious orthopaedic diseases in daily activities. With joint problems, functional braces can facilitate normal kinematics of injured joint while limiting abnormal joint tracking pattern or movement.

## CONTROLLED

Controlled orthoses are technically-intelligent orthotic devices, which mainly offer post-surgical protection and accelerate rehabilitative programs during recovery phase. Controlled orthoses can effectively protect injured tissues or joints by controlling range of motion.

### 117 INDEX

### **ABOUT AccuTex**

Knitted supports has been received extensive acclaim for their most impressive feature of soft touch. Whereas joint motion is a dynamic process and need to be properly protected, it is important to strike a balance between security of support and freedom of movement. In order to achieve this balance, OPPO MEDICAL has adapted a delicate knitting technique to enhance the construction of fabric, which infuses knitted supports with superior stability while also maintaining good coverage to realize the promise of comfort during wear.

### **WHY AccuTex**

- Better quality of support and therapeutic effect
- Superior improvement of proprioception and muscular performance
- Higher level of joint stability
- Greater wearing comfort

### **SECRETS BEHIND AccuTex**

Improved knitting construction provides a combination of toughness and flexibility, generated from a rigorous and time-consuming producing process, that enables our knitted supports to offer better functionality and wearing experience. "Toughness" results from a stronger knitted structure that enables supporting accessories to conform to the body for stable support. "Flexibility" enables supports to provide outstanding comfort while maintaining sufficient space for repeated joint motion.

# Elite

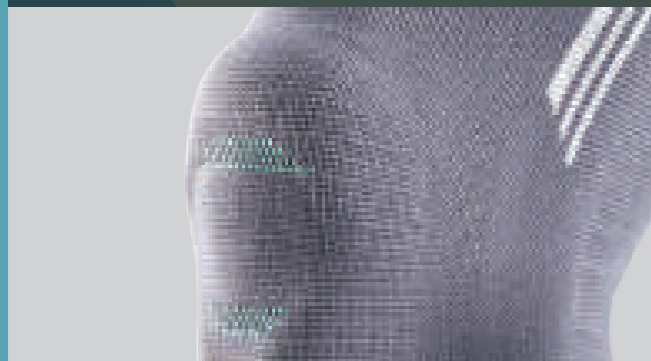

## UNSURPASSED MANUFACTURING PROCESS

### Seamless knitting

Seamless knitting technology improves the structure of the support by enabling it to conform to the body without chafing. Seamless designs thus eliminate pressure, friction, and skin irritation, enhancing overall comfort during long-term wear.

### Heat-pressed construction

The heat-pressed construction helps bond the accessory closely to the knitted fabric, achieving greater protective effect for the support.

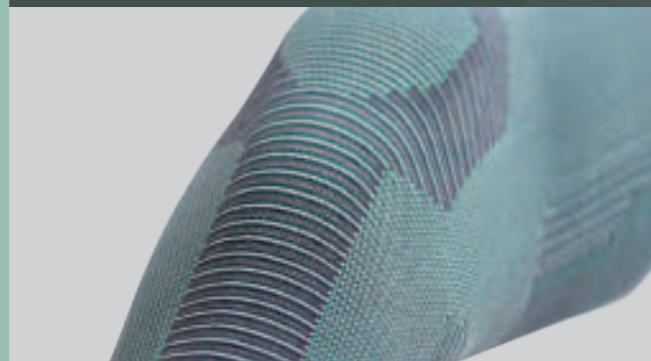

## UPGRADED FUNCTIONALITY

### 3D energizing pattern

3D energizing pattern is located on the inner side of knitted supports, centered around the peripheries of joints or major muscle groups. This enhances proprioception, which increases the sensory input, in turn improving motion control.

### Adaptable accessories design

OPPO MEDICAL takes all the details into consideration when designing accessories to help ensure proper movement, modifying them to improve their structure for best individual fit.

## ULTRA FIT

### The perfect combination of fit, comfort, and function

In accordance with variation in anatomical structure, the back support is tailored to male and female body shapes to meet individual needs. The unique structure of the support provides two modes of fit: Linear-shaped, and V-shaped. Users can choose according to the curves of their lumbar spine, enabling a closer fit to the waistline and providing a good level of coverage.

### Elasticated zones

Creases and folds can be diminished when bending the joint, increasing comfort during movement.

## REFINED DETAILS

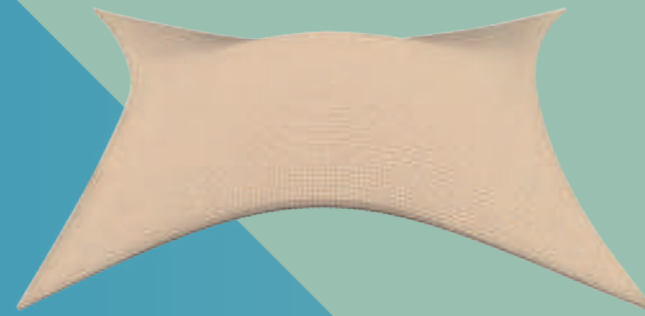

### Jacquard knit

Compared to mono-colored traditional supports, the new supports utilize computer programmed stitching to make several jacquard knits for a more attractive look that perfectly integrates elegance and function.

### Comfortable edge

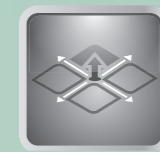

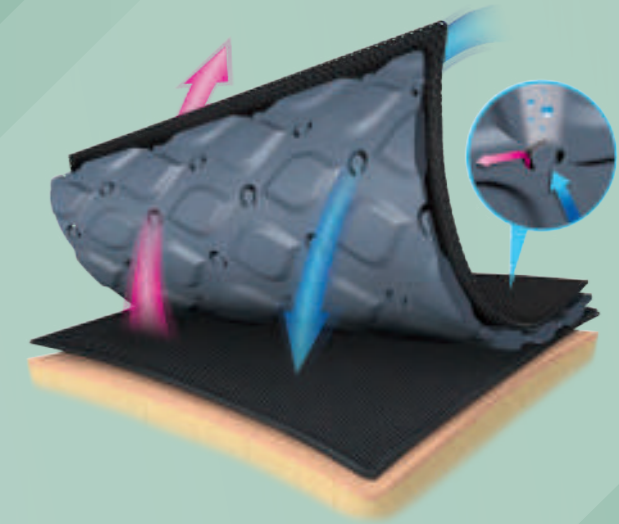

Reflecting OPPO MEDICAL's dedication to a superior wearing experience, the new orthopaedic products adopt meticulous stitching to make the fabric edge smoother than ever. Reduced protrusion at the seams, making the support more natural and comfortable, means users will not feel a thing during wear, which creates ultimate comfort for prolonged use.

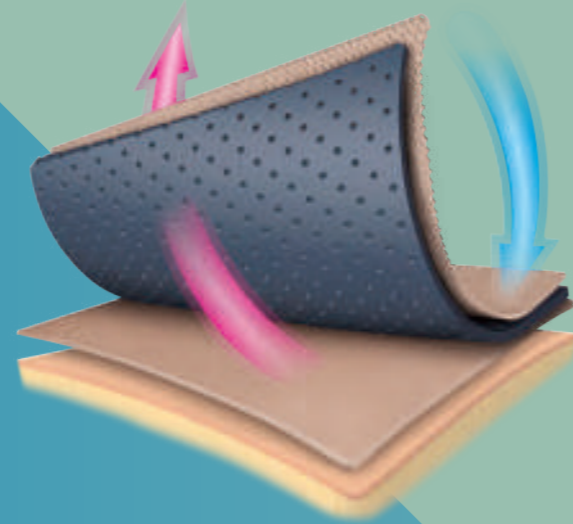

## 4 Way Stretch Knitting

4 way stretch knit fabric offers an extra level of comfort and ease owing to its outstanding stretchability. It provides the right amount of compression to relieve common muscular disorders. All-around protection supports weak joints and achieves maximum comfort during wear. Due to its extreme stretchability, it conforms to different body activities without losing shape. The outstanding resilience of 4 way stretch knit fabric improves wearing compliance.

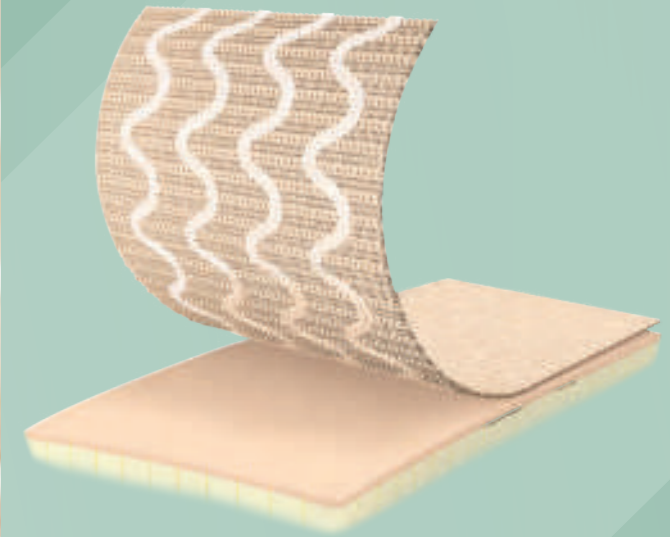

## CoolPrene

CoolPrene is a breathable material that features an innovative ventilation structure for outstanding moisture management. The perforations and grooves rapidly dissipate perspiration and heat and bring cool air in. The grid design generates a compression effect, providing compressive support to joints during exercise for improved stabilization. This dynamic compression also relieves muscular discomfort. The combined benefits of CoolPrene help reduce the rate of recurrent injury and offer all-around protection to muscles.

## Breathable Neoprene

Breathable neoprene helps regulate body heat to optimum temperature and provide warmth to muscles. The perforated material allows air to circulate around the body and forms a zone of insulation helping wearers stay warm in diverse conditions. This high-durability fabric firmly supports muscles and maintains ideal body temperature through its perforated design. Breathable neoprene comes in just the right thickness, which offers comfort and shock protection, and its flexibility ensures a fit-to-form feel and ease of mobility while moving.

## Stretchy Grip Wrap

Stretchy grip wrap is an elastic fabric coated with sequential silicone strips. It offers supportive protection and targeted compression to relieve inflammation symptoms, support weak joints, and reinforce muscle strength. Stretchy grip wrap produces a dynamic massage effect which reduces muscle fatigue. The continuous silicone strips help prevent the brace from slipping off affected area such as ankle, knee, wrist, or elbow. Stretchy grip wrap is a stable strapping system offering optimal protection during the rehabilitation process.

# SPINE

## 2953 ACCUTEX™ SPINAL ADJUSTOR

PATENTED

### Indications

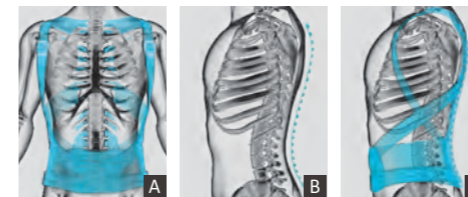

- Spondylitis
- Hyperkyphosis
- Osteoporosis
- Postoperative stabilization

**A** The spine brace can be molded by the medical professionals to meet each individual's spinal curvature for better compliance. It helps relieve tightness and discomfort of the trunk muscles and holds the spine in proper alignment, ensuring an improvement in posture and in mobility.

**B** Maintain an erect posture by holding the shoulder back and straight with integrated tension forces with the help of the shoulder straps and reinforcement straps. Included pads help reduce pressure and eliminate friction to assure a maximum comfort.

### Mechanism

**A** Use shoulder straps to expand the chest, hold shoulders back and allow scapular muscles to contract to keep upper back erect at the same time.

**B** The anatomical spine brace is sculpted to the lumbar curve, which functions mainly to maintain a stable and functional spinal alignment, reduce kyphosis and other symptoms from osteoporosis.

**C** Integrated with lumbar brace and pelvic straps to enhance proper abdominal pressure to keep body upright, allowing the wearer to remain active.

### Size

#### Back Height (From C7 to the sacrum)

15"	37.0 - 43.0 cm	14% - 17 inches	17"	43.0 - 49.0 cm	17 - 19½ inches
19"	49.0 - 55.0 cm	19% - 21½ inches	22"	55.0 - 61.0 cm	21% - 24 inches

#### Waist

S	70.0 - 80.0 cm	27% - 31½ inches	M	80.0 - 90.0 cm	31% - 35½ inches
L	90.0 - 100.0 cm	35% - 39½ inches	XL	100.0 - 110.0 cm	39% - 43½ inches

# 2952 ACCUTEX™ TRI-FEND LUMBAR SECURE

PATENTED

### Indications

- Postoperative lumbar stabilization
- Post laminectomy
- Post intervertebral disc surgery
- Osteoporosis
- Spondylolysis/Spondylolisthesis
- Serious stenosis
- Vertebral body fracture

# 2951 ACCUTEX™ LUMBAR DUAL-SECURE

PATENTED

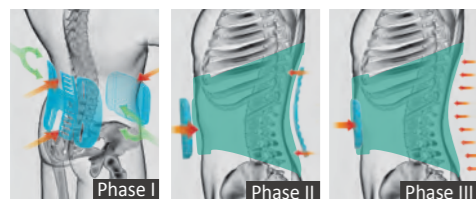

### Indications

- Osteoporosis
- Spondylolysis / Spondylolisthesis
- Degenerative instability
- Spinal stenosis
- Intervertebral disc prolapsed

- A** Butterfly plate integrates with spine brace to provide highest movement limitation of lumbar and improve stabilization and correct posture.
- B** Anatomical spine brace is sculpted to the neutral contours of lumbar curve, allowing a stable alignment limitation of lumbar with superior compliance.
- C** Reinforced straps allow individually adjustable compression to support core muscles and help evenly tighten the butterfly plate to ensure an adaptive fit for better compliance.

### Mechanism

### Three Phases of Treatment Program

- Phase I:** Provides highly-stabilized protection to control the spine in a neutral position and reduce burden on affected tissues during acute stage.
- Phase II:** During patient's progressive stage the butterfly plate can be removed for more trunk movement, and improve muscular strength and coordination.
- Phase III:** As muscle function improves, the integrated protection exerted by the reinforced straps and the abdominal pad allow functional assistance for better muscle activation and circulation.

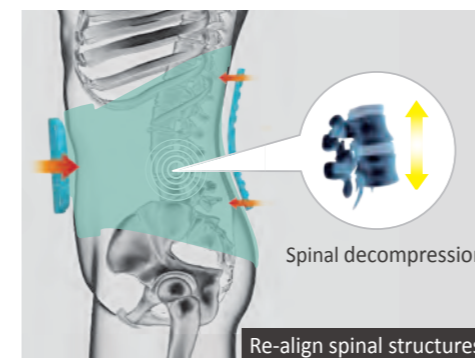

### Size

S	70.0 - 80.0 cm	27% - 31% inches	M	80.0 - 90.0 cm	31% - 35% inches
L	90.0 - 100.0 cm	35% - 39% inches	XL	100.0 - 110.0 cm	39% - 43% inches
2XL	110.0 - 120.0 cm	43% - 47% inches			

- A** Anatomical spine brace is sculpted to the contours of lumbar curve, creating a stable alignment to ensure optimum compliance. The spine brace, made of lightweight aluminum and incorporated with smart cap, permits efficient adjustment.
- B** Four flexible stays on the back provide concentrated compression to the lumbar-sacral area. The high flexibility allows the stays to adapt easily to the spine for a better stabilization.
- C** Reinforced straps allow adjustable compression to support core muscles and provide a tight fit for better compliance.

### Mechanism

The Lumbar Dual-Secure provides effective conservative treatment for spinal decompression, achieving and maintaining optimal lumbar curve are the primary mechanisms of action.

The anatomical spine brace works together with abdominal pad to maintain spine in a neutral curve for ideal space of foramina, thus relieving pressure on nerves.

The Lumbar Dual-Secure reduces back pain, joint instability and function limitation associated with degenerative spinal disease, allowing the patient to remain active.

### Size

S	70.0 - 80.0 cm	27% - 31% inches	M	80.0 - 90.0 cm	31% - 35% inches
L	90.0 - 100.0 cm	35% - 39% inches	XL	100.0 - 110.0 cm	39% - 43% inches
2XL	110.0 - 120.0 cm	43% - 47% inches	3XL	120.0 - 130.0 cm	47% - 51% inches

# 2968 ACCUTEX™ LUMBAR SECURE

- Indications**
- HIVD
  - Spondylosis
  - Low back pain
  - Muscle strain

- A** Four flexible stays on the back provide concentrated support to the lumbar-sacral area. The highly flexible metal allows the stays to adapt easily to the spine for better stabilization.
- B** Reinforced straps allow adjustable compression to support core muscles and provide a tight fit for better compliance.
- C** Padded abdominal panel combined with reinforced straps provides an intra-compression on the abdomen for posture correction.

**Mechanism**

- A Flexible Stays**  
Help stimulate cutaneous mechanoreceptors to augment trunk proprioceptive inputs, reminding the back to maintain a neutral position.
- B Reinforced Straps**  
Provide dual compression to core muscles and activate contraction of the deep intrinsic muscles for vertebral body stability.
- C Abdominal Panel**  
Activates weak abdominal muscles and increases the intra-abdominal pressure to alleviate the forward loads on vertebral body, reducing the tension on posterior spinal muscles and the pressure between intervertebral discs.

**Size**

		Height: 9" / 12"	
S	70.0 - 80.0 cm	27% - 31% inches	M 80.0 - 90.0 cm 31% - 35% inches
L	90.0 - 100.0 cm	35% - 39% inches	XL 100.0 - 110.0 cm 39% - 43% inches
2XL	110.0 - 120.0 cm	43% - 47% inches	

# 2356 *Elite* POSTURE BRACE

**Indications**

- Spondylosis
- Osteoporosis
- Kyphosis

- A** Aluminum stays on back provide customized adjustment and extra support to spine for proper posture.
- B** Reinforced straps provide controlled compression and ensure an adaptive fit.
- C** Highly elastic material features great breathability and better compliance.
- D** User-friendly pocket design ensures easy application.

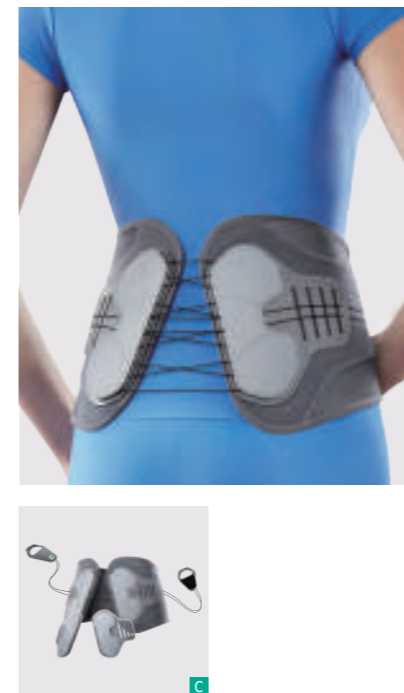

**Size**

**Back Height (From C7 to the sacrum)**

L	90.0 - 100.0 cm	35% - 39% inches	XL	100.0 - 110.0 cm	39% - 43% inches

# 2352 *Elite* ADJUSTABLE BACK SUPPORT

**Indications**

- Spondylolysis
- Spondylolisthesis
- Osteoporosis
- Herniated intervertebral disc
- Spinal stenosis

- A** Lumbar panels provide posterior support for spine and lumbar region, which stimulates sensory inputs to facilitate joint stabilization and enhance spinal stability.
- B** Lumbar pads help support lower back muscles to maintain correct posture and increase wearing compliance.
- C** Dual pulley system permits separate adjustment of panel fit to upper and lower region of lumbar spine and pelvis to provide controlled compression.
- D** Adjustable Back Support made of highly breathable material with ventilated design features great breathability and extra comfort during long-term wear.
- E** User-friendly pocket design ensures easy application.

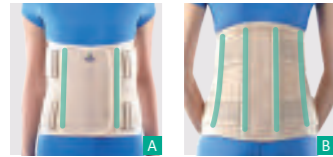

**Size**

S	61.6 - 79.4 cm	24% - 31% inches	M	79.4 - 89.5 cm	31% - 35% inches

2XL	106.7 - 116.8 cm 42 - 46 inches		

Controlled

## 2167 SACRO LUMBAR SUPPORT WITH REMOVABLE PAD

- A** Eight flexible stays on back
- B** Compression with cushioning
- C** Reinforced straps add support and stability
- D** Heavy-duty elastic for firm, even compression

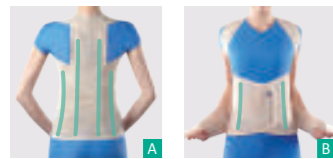

Size		Height: 9"	
S/M	61.0 - 86.4 cm 24 - 34 inches	L/XL	86.4 - 111.8 cm 34 - 44 inches

Functional

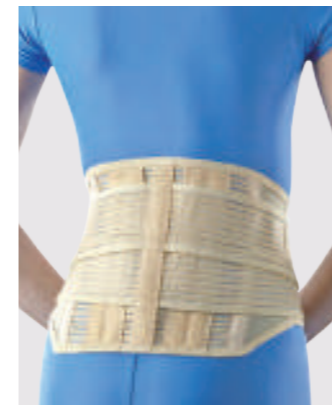

## 2166 SPINAL BRACE

- A** Four stays on back
- B** Two stays on lumbar area
- C** Reinforced straps add support and stability
- D** Shoulder straps to expand the chest, hold shoulders back
- E** Adjustable hook and loop fasteners ensure easy application and fit
- F** Lightweight, ventilated elastic for firm compression and comfortable wear

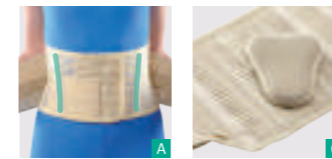

Size		Height: 9"	
S	58.4 - 71.1 cm 23 - 28 inches	M	71.1 - 83.8 cm 28 - 33 inches
L	83.8 - 96.5 cm 33 - 38 inches	XL	96.5 - 109.2 cm 38 - 43 inches
2XL	109.2 - 121.9 cm 43 - 48 inches		

Functional

## 2263 SACRO LUMBAR SUPPORT WITH PAD

- A** Two flexible stays on abdomen
- B** Four flexible stays on back
- C** Compression with cushioning
- D** Reinforced straps for custom fit
- E** Lightweight, ventilated elastic for firm compression and comfortable wear

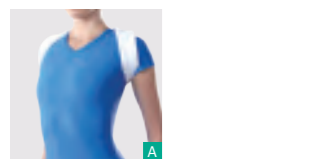

Size		Height: 9"	
S	58.4 - 71.1 cm 23 - 28 inches	M	71.1 - 83.8 cm 28 - 33 inches
L	83.8 - 96.5 cm 33 - 38 inches	XL	96.5 - 109.2 cm 38 - 43 inches
2XL	109.2 - 121.9 cm 43 - 48 inches	3XL	121.9 - 134.6 cm 48 - 53 inches

Functional

## 4075 CLAVICLE BRACE

- A** Soft foam padding provides comfortable wear
- B** Adjustable hook and loop fasteners ensure easy application and fit
- C** Non-stretch fabric provides firm support and stability
- D** Durable material for long-term use

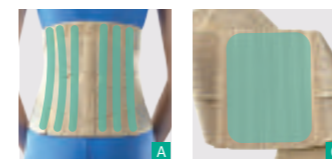

Size		Height: 11"	
XS	46.0 - 53.7 cm 18% - 21% inches	S	53.7 - 63.8 cm 21% - 25% inches
M	63.8 - 76.5 cm 25% - 30% inches	L	76.5 - 89.2 cm 30% - 35% inches
XL	89.2 - 104.5 cm 35% - 41% inches		

Functional

## 2164 SACRO LUMBAR SUPPORT

- A** Six metal stays on back
- B** Reinforced straps add support and stability
- C** Reinforced panel in lumbar region
- D** Breathable elastic with firm compression

Size		Height: 11"	
S	58.4 - 71.1 cm 23 - 28 inches	M	71.1 - 83.8 cm 28 - 33 inches
L	83.8 - 96.5 cm 33 - 38 inches	XL	96.5 - 109.2 cm 38 - 43 inches
2XL	109.2 - 121.9 cm 43 - 48 inches	3XL	121.9 - 139.7 cm 48 - 55 inches

Functional

## 2265 SACRO LUMBAR SUPPORT

- A** Four metal stays and two flexible stays on back
- B** Reinforced straps add support and stability
- C** Lightweight, ventilated elastic for firm compression and comfortable wear

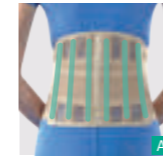

Size		Height: 10"	
S	58.4 - 71.1 cm 23 - 28 inches	M	71.1 - 83.8 cm 28 - 33 inches

## CERVICAL COLLAR- PROFESSIONAL

PATENTED

### Indications

- Cervical immobilization with trachea opening
- Cervical spinal stenosis
- Cervical spondylolisthesis

Controlled

The cervical collar series is specifically designed for patients suffering from mild to severe cervical spine disorders; three different levels provide the most holistic care to meet each patient's needs.

The Cervical Collar-Professional with inverted triangular trachea opening is beneficial for tracheostomy management. Total contact anterior sternal pads and occipital support immobilize the injured cervical spine, in relieve pain and offer superior wearing comfort.

- A** The easy-secured strap helps to adjust the size for a custom-fit and to secure the occiput at the same time.
- B** The design of bilateral points together with the front point forming a tri-point system, helps to firmly stabilize the angles of mandible and chin. Tri-point system relieves pain from injured area and improves wearing compliance.
- C** Cutting-edge inverted triangular opening offers easy access for tracheotomy and airway care.
- D** Ergonomically-designed plastic frames hold up the sternum and support occipital to stabilize the patient's neck, reduce skin discomfort and disperse pressure.
- E** Ergonomic shoulder curve is distinctively engineered to enhance wearing comfort and reduce undesired pressure.

Size	
S	5.1 - 6.4 cm 2 - 2½ inches

# CERVICAL COLLAR- PRIMARY

PATENTED

**Indications**

- Whiplash syndrome
- Cervical disk dysfunction
- Cervical spondylosis

Functional

The cervical collar series is specifically designed for patients suffering from mild to severe cervical spine disorders; three different levels provide the most holistic care to meet each patient's needs.

The Cervical Collar-Premium helps patients to maintain a limited range of motion, especially for those recovering from moderate to severe cervical spine disorders such as unstable vertebral column. Ergonomic design takes into consideration the best stabilization and comfort during activity of daily living.

- A** The easy-secured strap helps to adjust the size for a custom-fit and to secure the occiput at the same time.
- B** The design of bilateral points together with the front point forming a tri-point system, helps to firmly stabilize the angles of mandible and chin. Tri-point system relieves pain from injured area and improves wearing compliance.
- C** Ergonomic shoulder curve is distinctively engineered to enhance wearing comfort and reduce undesired pressure.

<b>S</b>	5.1 - 6.4 cm	2 - 2½ inches	<b>M</b>	6.4 - 7.0 cm	2½ - 2¾ inches
<b>L</b>	7.0 and above	2¾ and above			

The cervical collar series is specifically designed for patients suffering from mild to severe cervical spine disorders; three different levels provide the most holistic care to meet each patient's needs.

The Cervical Collar-Primary provides adequate immobilization and stabilization, supporting patients with mild spine injuries such as muscle strains and ligament sprains. Its customized fit combines easy-to-wear function with a more stylish design.

- A** Two-piece plastic construction, ideal for easy cleaning, designed for firm stabilization and immobilization; engineered for more simplicity and high quality.
- B** The user-friendly design provides flexibility in making height adjustment, and indicator of an ideal position.
- C** Softly and securely supports the chin and reduces the pressure on the clavicle.
- D** Visible score lines and adjustable sizing strap allow for a customized fit for all patients.

# SHOULDER ACTIVATOR

PATENTED

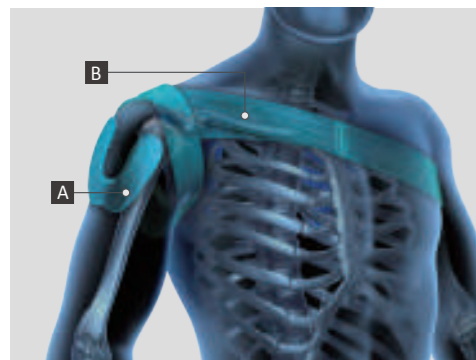

### Indications

- Rotator cuff tear
- Shoulder subluxation
- SLAP lesion
- Tendomyopathy

- A** V-shaped silicone pad combined with reinforced elastic bands holds the glenohumeral joint in place to secure the joint stabilization.
- B** Raised dots on the silicone pad stimulate and help increase proprioception to improve the joint motion and muscle activation.
- C** Adjustable dual end strap ensures proper fit and easy application for either side of the shoulder.
- D** Padded strap at axillary area provides extra comfort during wear.

### Mechanism

- A V-shaped Silicone Pad**
  - Provides upward force to lift the arm, which can prevent the glenohumeral joint from downward subluxation and to reduce the load on muscles and ligaments surrounding the shoulder joint.
  - Helps muscle activation and increases proprioception by the stimulating dots, which provide sensory input at the muscle belly of upper arm.
- B Double Layer Reinforced Bands**
  - Hold the humeral head in place to avoid anterior or posterior dislocation.

### Size

# 2355 Elite PELVIC STABILIZING BELT

- Indications**
- Sacroiliac joint dysfunction
  - Sacroiliitis

- A** Sacroiliac pads provide targeted compression and better coverage to the pelvis, alleviating discomfort and improving wearing compliance.
- B** The pelvic strap consists of sacral and ischial straps, which can be easily adjusted for custom fit and controlled compression to enhance pelvic stability.
- C** User-friendly pocket design ensures easy application.

The double-strap design provides full dimensional support for the pelvic cavity. It expands the security and stability coverage area, including two positions:

- A Sacral Strap in High Position**
  - Wear below ASIS edge
  - Manage sacroiliac joint symptoms
  - Stimulate abdominal and back muscles for pelvic alignment correction
- B Ischial Strap in Low Position**
  - Wear around greater trochanter
  - Manage pubic symphysis symptoms
  - Stimulate pelvic floor muscles for pelvic cavity support

**Size**

# GENIUS-X LIGAMENT BRACE

PATENTED

## Indications

- Post-surgical rehabilitation of ruptured anterior cruciate ligament / posterior cruciate ligament / lateral collateral ligament / medial collateral ligament
- Knee instability after torn anterior cruciate ligament / posterior cruciate ligament / lateral collateral ligament / medial collateral ligament
- Conservative treatment of chronic knee instability

Controlled

The Genius-X Ligament Brace uses lightweight materials and an advanced brace structure that make it easier to apply and fit the injured leg perfectly. By adding or removing straps as desired, force direction can be changed and specific muscles strengthened. Reduce the burden on ligaments, and improve mobility during rehabilitation.

- A** Lightweight aluminum frame increases comfort during wear and enables normal muscular function.
- B** Adjustable straps are available in ACL, PCL, MCL, and LCL versions.
- C** Angle controller uses swappable angle stops to provide flexion angles of 0° to 90° and extension angles of 0° to 45°, allowing patients to adjust a range of motion at different rehabilitation stages to help promote recovery and prevent injury recurrence.
- D** Easy-push cover can be removed easily and conveniently just by pressing both sides.
- E** Quick-release buckles allow patients to put on or take off the brace in an instant.

## Mechanism

### ACL Version

For ACL patients, ligament ruptures will cause excessive forward movement of tibia and excessive backward movement of femur. Therefore, strap 6 should be removed to reduce anterior force on femur.

### PCL Version

PCL patients will face excessive backward movement of tibia and excessive forward movement of femur. Therefore, strap 3 and 4 should be removed to reduce anterior force on tibia as well as posterior force on femur.

### MCL/LCL Version

The MCL and LCL control the transverse movements of the knee, so the forward and backward force on femur and tibia should be the same. Consequently, no straps need to be removed.

# ELITE GENU ADJUSTOR

**PATENTED**

**Indications**

- Post-surgical rehabilitation
- Postoperative stabilization
- Range of motion controlled after surgery

Controlled

**3132**  **reddot design award winner 2010**

# OA TRI-POINT STABILIZER

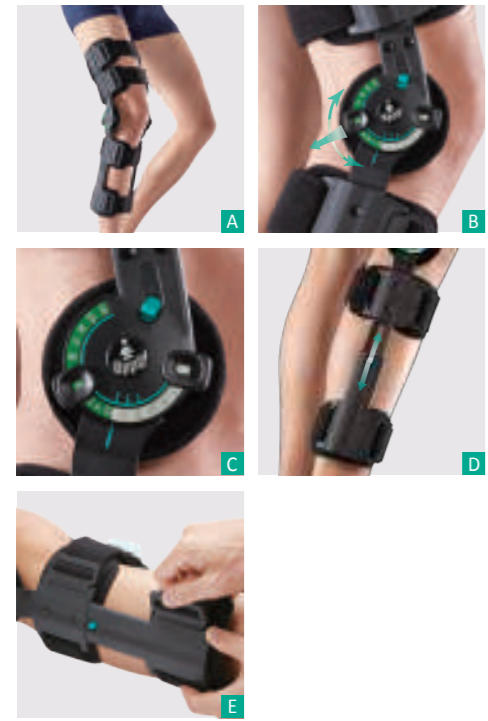

**Indications**

- Mild to moderate unicompartmental osteoarthritis
- Unicompartmental knee conditions requiring load reduction

Controlled

The Elite Genu Adjustor takes care full action of the lower extremity during post-operation recovery. Superior post-operative support and stability come in a range of lightweight and user-friendly designs that maximize comfort during wear and are easier to put on or remove.

- A** Total open design vents heat and increases comfort.
- B** Sliding-fit angle controller greatly increases ease of operation. 9 angles of extension and 11 angles of flexion can be chosen to restrict ROM and also prevent repeated injury.
- C** Easy secure button offers three one-touch locking angles for quick adjustment.
- D** Adjustable strut can be set to desired brace length precisely.
- E** Quick release buckle makes donning and doffing a simple task.

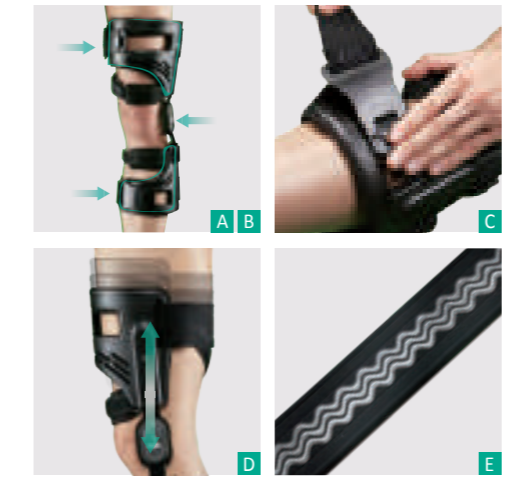

**Mechanism**

Mainly provide extra stability for the injured joint during healing. Besides protecting the knee by compressing the surrounding soft tissues or restraining joint motion, a brace can help restore joint dynamic stability by enhancing proprioception.

**Size** Length: 50.8 - 64.6 cm (20 - 25")

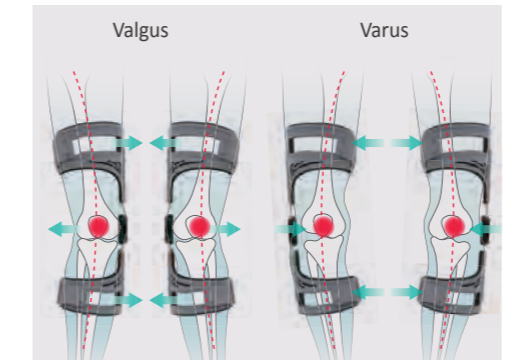

One size fits most	
45.7 - 73.7 cm	18 - 29 inches

The OA Tri-Point Stabilizer is based on the tri-point force system which regulates abnormal compressive force from the degenerative side to ensure normal alignment, making it ideal to relieve pain caused by tissue degeneration and effectively prevent further deterioration.

- A** Uni-body structure and straps form tri-point force system
- B** Off-loading shell ensures correction, maintains mobility
- C** Easy-locking buckles for quick and simple application
- D** Telescopically extends 0", ½", or 1"
- E** Silicone coating prevents slipping

**Mechanism**

**Tri-point Force System**

Single upright structure combines with corrective force straps to form tri-point force system, which transfers the load on the degenerative side to the healthy compartment of the knee. The system provides efficient pain management for the affected compartment, enabling patients to achieve better mobility with noninvasive treatment.

## 1028

### PATELLA TRACKING SUPPORT

#### Indications

- Patellofemoral pain syndrome
- Patellar maltracking combined with or without patellar rotation

CoolPrene  
Functional

- A** C-shaped pad and adjustable straps for patella tracking
- B** Open-back design for easy adjustment
- C** Pressure release around knee cap
- D** CoolPrene material offers superior comfort

#### Mechanism

Abnormal patellar tracking with patellar rotation requires the Patella Tracking Support. Its unique centralized reinforced straps can be adjusted to different degrees of tension to finely adjust rotation of patella as desired.

# 2930

## KNEE POLY-STABILIZER

PATENTED

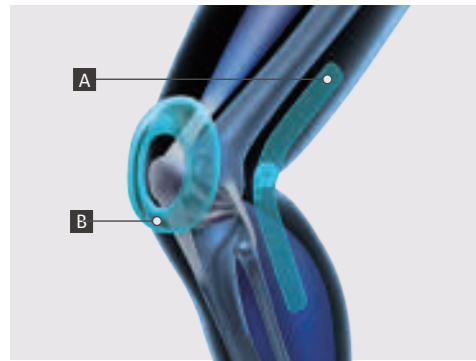

### Indications

- Cruciate ligament sprain
- Collateral ligament injury
- Knee instability

- A** High density weave and padded silicone ring help prevent the patella from tilting.
- B** Bilateral removable hinges support medial and lateral sides of knee to prevent varus and valgus stress.
- C** Reinforced straps, which can be adjusted per individual needs, ensure stabilization and comfortable fit during movements.

### Mechanism

- A Bilateral Removable Hinges**
  - Combine with the strap to work as the knee preserver in flexion-extension motion to provide a passive support.
  - Immobilize the knee joint while protect it from valgus and varus stress by the limited direction of the hinge.
- B Padded Silicone Ring**
  - Provides constraining forces to help maintain the patella in the correct position.
  - Coacts with the high density weave during activities to massage through intermittent pressure to reduce edema and relieve pain by continued sensory inputs.

### Size

S	33.0 - 36.0 cm	13 - 14% inches	M	36.0 - 39.0 cm	14% - 15% inches

4XL	51.0 - 54.0 cm	20% - 21% inches			

# 2923

## C-KNEE STABILIZER

PATENTED

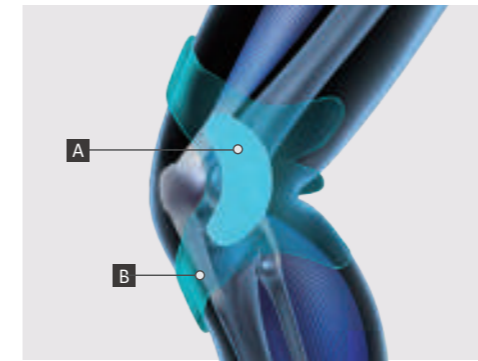

### Indications

- Patellar lateral tilting
- Patellar lateral subluxation

- A** Adjustable C-shaped pad provides concentric pressure to secure the patella in proper position.
- B** Detachable panel fits left/right knee and may be removed per recovery status.
- C** Bilateral spiral stays provide additional knee stability and better support, helping prevent ligament sprain.
- D** Reinforced straps, which can be adjusted per individuals needs, offer additional compression and support for better stabilization.

### Mechanism

- A C-shaped Pad**
  - Collaborates with reinforced straps to provide a lateral-to-medial force which counteracts the lateral tilting or subluxating of the patella.
- B Elastic Detachable Panel**
  - Enhances the function of C-shaped pad and offers an intermittent compression massage to release tight tissues during movements.

### Size

S	33.0 - 36.0 cm	13 - 14% inches	M	36.0 - 39.0 cm	14% - 15% inches

4XL	51.0 - 54.0 cm	20% - 21% inches			

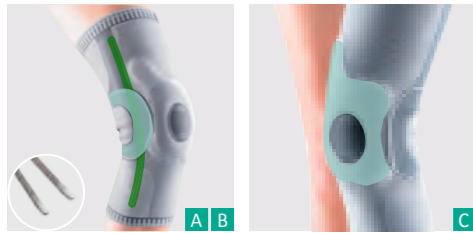

# 2921

## FORCE-IN-ONE PATELLA STABILIZER

PATENTED

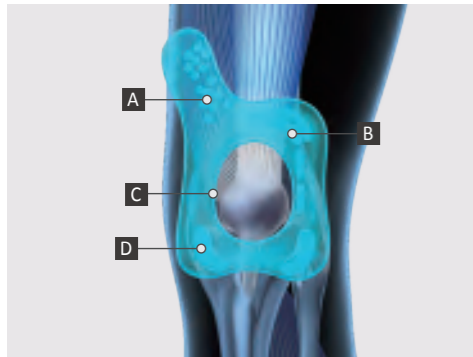

### Indications

- Patellofemoral pain syndrome
- Patellar tracking disorder

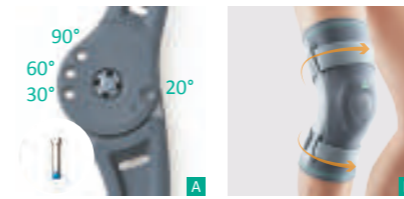

- A** High compression bilateral U-shaped bands lock medial and lateral knee joint to enhance stability.
- B** Bilateral spiral stays provide additional knee stability and better support, helping prevent ligament sprain.
- C** Multi-function silicone pad, incorporating four functions for effective patella support, provides efficient facilitation and massaging effect to help maintain the patella in proper tracking.

### Mechanism

- A Silicone Dots**
  - Work as a stimulator to facilitate muscle contraction and help keeping the patella in normal tracking.
- B Lateral Streamlined Nubs**
  - Help relax the tension of retinaculum to minimize the pulling force.
- C Donut-shaped Patella Opening**
  - Helps maintain the patella in the correct position.
- D Bilateral Knobs**
  - Help reduce patella shifting as well as offer additional support and stabilization.

Size			Right / Left

## POLYCENTRIC KNEE STABILIZER

### Indications

- Meniscus tear
- Arthritis
- Osteoarthritis

- A** Adjustable hinge conforms to body contour and can be used to restrict range of movement with progress of recovery. Flexion angle of knee can be limited to 30°, 60°, or 90° and limits at 20° extension angle to prevent full extension.
- B** Four reinforced inelastic straps on upper and lower leg combine with adjustable hinges to provide custom fit, reinforcing the stability of the support.
- C** Multi-function silicone pad helps maintain proper patella position and offers moderate compression around patella to reduce swelling and irritation.
- D** 3D energizing pattern stimulates sensory inputs to facilitate joint stabilization.
- E** Elasticated zones offer freedom of movement with ideal coverage.
- F** Comfortable edge design holds firm and provides a snug fit without being too tight.
- G** Seamless design enhances all-around comfort and compliance.

Size			Right / Left		
S	33.0 - 36.0 cm	13 - 14% inches	M	36.0 - 39.0 cm	14% - 15% inches

2XL	45.0 - 48.0 cm	17% - 18% inches			

2323

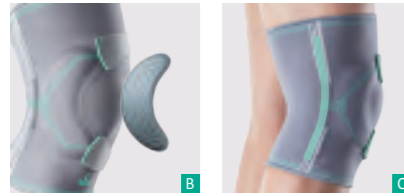

## PREMIUM C-PAD KNEE STABILIZER

### Indications

- Chondromalacia
- Patellar tracking disorder
- Patellar subluxation syndrome

- A** 8.5" height facilitates fitting and reduces restriction of movement.
- B** C-pad incorporated with reinforced straps provides concentric pressure to maintain proper patella position.
- C** Bilateral spiral stays prevent knee sprains by reinforcing support and stability of joints.
- D** 3D energizing pattern stimulates sensory inputs to facilitate joint stabilization.
- E** Elasticated zones offer freedom of movement with ideal coverage.

### Size

S	33.0 - 36.0 cm	13 - 14 1/4 inches	M	36.0 - 39.0 cm	14 1/2 - 15 1/2 inches

ANKLE STABILIZER

PATENTED

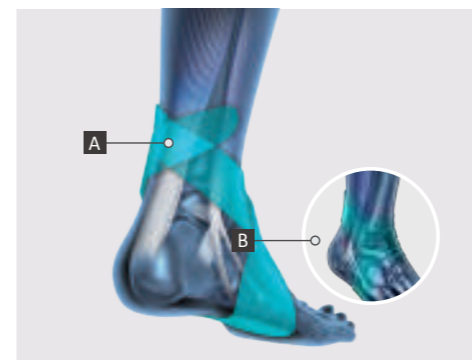

Indications

- Ankle instability
- Ankle sprain

- A** Reinforced ankle strap is a detachable accessory allowing easy adjustment for individual fit, which provides extra stabilization by limiting excessive supination and pronation of ankle while generating added compression to reduce edema.
- B** X-shaped pattern combines with reinforced strap to provide figure eight taping effect for advanced motion control and improved joint stability.

Mechanism

- A Reinforced Ankle Strap**  
Integrates high elastic band and non-elastic straps to form forceful strap system, which offers optimal correction effect to adjust improper ankle position, restricting undesired supination/pronation and then prevents secondary ankle sprain without limiting ankle dorsiflexion and plantar flexion.
- B X-Shaped Pattern**  
High density weave provides a figure eight lock to reduce excessive side stretch on ankle ligaments by limiting foot inversion/eversion motion.

Size

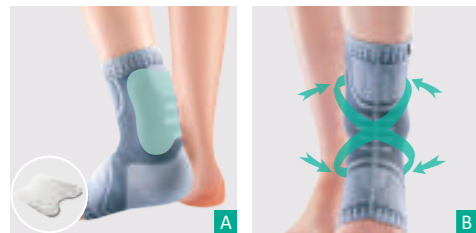

S	18.0 - 20.0 cm	7% - 7% inches	M	20.0 - 22.0 cm	7% - 8% inches
L	22.0 - 24.0 cm	8% - 9% inches	XL	24.0 - 26.0 cm	9% - 10% inches
2XL	26.0 - 28.0 cm	10% - 11 inches	3XL	28.0 - 31.0 cm	11 - 12% inches
4XL	31.0 - 34.0 cm	12% - 13% inches			

ANKLE

# 2903 ANKLE ACTIVATOR

PATENTED

- Indications**
- Achilles bursitis
  - Achilles tendinitis

- A** Concentric ripples on the butterfly-shaped silicone pad surrounding the Achilles tendon offers optimal compression and massaging effects to reduce edema and relieve pain.
- B** X-shaped pattern functions like figure eight taping to limit excessive motion for the ankle joint stability.

**Mechanism**

- A Butterfly Shaped Silicone Pad**
  - Provides local massage effect between compression and decompression during movement. This pumping action accelerates metabolism and healing speed.
  - Improves the fluid circulation through the grooves of the concentric ripples to reduce the edema caused by inflammatory tissue.
- B X-shaped Pattern**
  - High density weave provides a figure eight lock to reduce excessive side stretch on Achilles tendon by limiting inversion/eversion motion.

### SLIDING-FIT WRIST BRACE

**Indications**

- Carpal tunnel syndrome
- Post-casting recovery
- Soft tissue injury of wrist
- Carpal bone dislocation/fracture

Functional

The Sliding-Fit Wrist Brace pioneers the sliding-fit mechanism which allows for easy length adjustment thanks to an intelligent axis design. The sliding-fit mechanism offers customized stabilization in various phases of injury or post-casting recovery for optimal support.

- A** Anatomically contoured, low-profile shell keeps wrist in neutral position and increases compliance
- B** Flexible strap permits adjustment of opening around thumb base for better fit and easy application
- C** Pliable cuff wraps around forearm to maintain alignment of ulna and radius
- D** Length can be adjusted for optimal support
- E** Inner pad provides ultra skin comfort

**Mechanism**

The sliding-fit mechanism allows length control for users to easily adjust the length for optimal support in various phases of the recovery process. The longer length provides excellent immobilization in acute injury or post-casting healing. The shorter length provides greater flexibility for post-rehabilitative protection. The Sliding-Fit Wrist Brace is anatomically contoured to the shape of the wrist, provides limited range of motion, and enhances recovery process.

Size	Right / Left
S	13.3 - 16.5 cm    5¼ - 6½ inches
M	16.5 - 19.7 cm    6½ - 7¾ inches
L	19.7 - 25.4 cm    7¾ - 10 inches

# 2984 WRIST STABILIZER

PATENTED

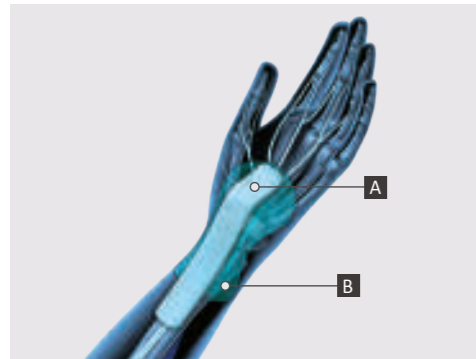

**Indications**

- Carpal tunnel syndrome

- A** Contoured wrist splint, removable according to individual needs, provides firm support to stabilize the wrist joint in resting position without limiting finger motion.
- B** Ergonomically designed silicone pad relieves the pressure on carpal area in wrist movement.
- C** Reinforced strap, a detachable accessory allowing easy adjustment for individual fit, provides extra support and stabilizes the wrist joint.

**Mechanism**

- A Contoured Wrist Splint**  
Positions the wrist at 20° extension in an effort to provide maximum release to the compressed median nerve and inflamed muscles, then prevents further inflammation and reduces the symptoms of carpal tunnel syndrome.
- B Ergonomic Silicone Pad**  
Provides optimum support and massage effects to relax the tension on wrist flexor muscles and helps reduce resultant symptoms.

# ELBOW

## 2987 ELBOW EPI-RELIEVER

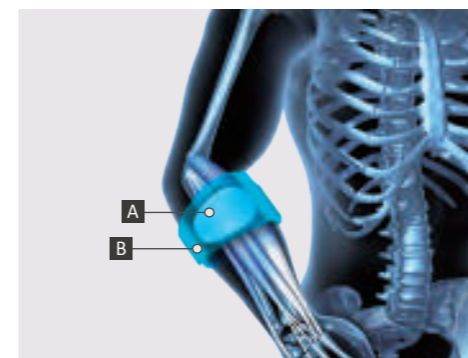

### Indications

- Tennis elbow
- Golfer's elbow

- A** The double layer strap includes a top band and a base strap which is bonded with a silicone pad, exerting gentle compression on the extensor or flexor muscle.
- B** The reinforced top band, featuring high density weave, enables the silicone pad to provide additional compression and support.
- C** Adjustable base strap provides easy adjustment and optimal wearing comfort for both left and right forearm.

### Mechanism

- A Silicone Pad**
  - Offers stable massaging effect to facilitate the circulation and exerts a mechanical force on the affected soft tissue.
  - Applies pressure on the tendon as a stimulus to prevent it from extensive scarring that may result in restricted functional movement.
- B Double Layer Strap**
  - Ensures adjustable compression and firm support for relieving pain, swelling and inflammation.
  - The base strap: forces a vertical counterforce pressure on the tendon, helping to assuage muscle over-contraction and lessen the stretch of injured tendon.
  - The top band: provides adjustable tension as an extra compression on the remodeling tendon to restore tendon's contractile energy and regain functional ability.

### Size

# OPPO BAND

The OPPO BAND is a complete progressive resistance exercise program for upper and lower body workouts! Our tension-progressive resistance bands are ideal for professional rehabilitation, home fitness and improving exercise performance.

## A Total Resistance Program

- Multi-function for strength training, stretching, muscle re-education training, coordination training, endurance training and core exercise.
- Simple to use and portable enough to take anywhere.
- Provides both concentric and eccentric force on the muscles, improving strength, range of motion and coordination.
- May be used to train a single muscle group or multiple muscle groups.
- Color-coded, progressive resistance from yellow to silver.
- Assists muscle performance.
- Varying band thickness for increasing resistance levels.

1.5 M

Purple	Extra Heavy	8005	8015	8025
Silver	Super Heavy	8006	8016	8026

## Knee Extension

### Position

Sit on a chair with hips and knees at 90 degrees. Place band around one ankle. Secure the other end to the back of the chair leg as shown.

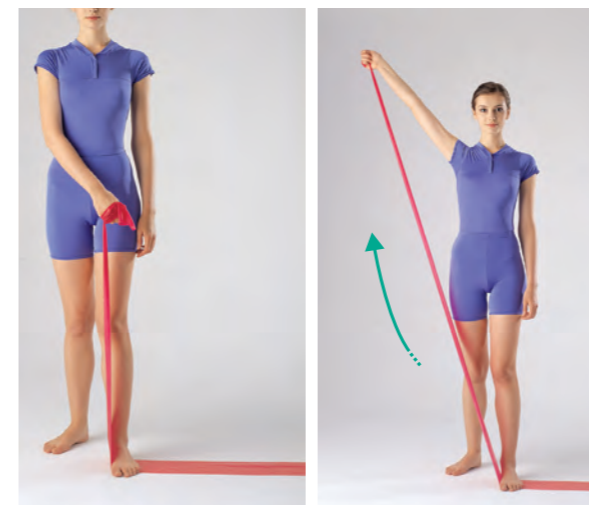

### Exercise

Extend knee. Hold leg in this position for 3 seconds then slowly return to starting position. Switch knees and repeat.

### Indications

- Meniscal injury
- Patellofemoral syndrome
- Anterior cruciate ligament sprain
- Osteoarthritis knee
- Patellar tilting

## Shoulder Diagonal Flexion

### Position

Place one end of band under foot and grasp the other end with the opposite hand at left waist level, palm facing in.

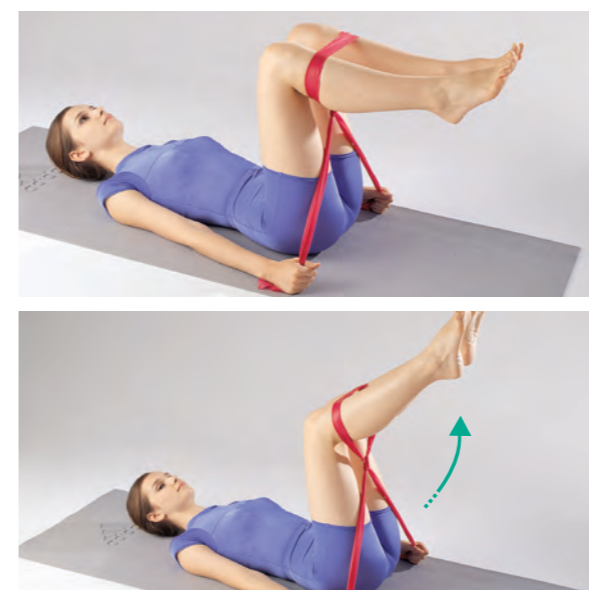

### Exercise

Lift arm up diagonally across the body ending with palm facing out. Slowly return to starting position. Switch hands / feet and repeat.

### Indications

- Frozen shoulder
- Shoulder impingement syndrome
- Rotator cuff strain
- Upper back pain

## Lower Trunk Lift

### Position

Lay on back with hips and knees bent. Loop band around knees. Grasp the band in both hands.

### Exercise

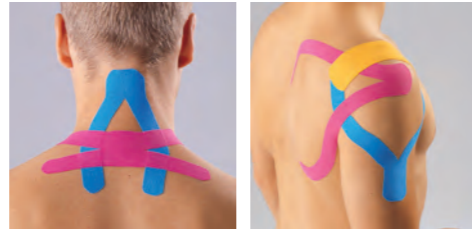

Lift knees up without moving arms. Hold this position for 3 seconds and slowly return to starting position.

### Indications

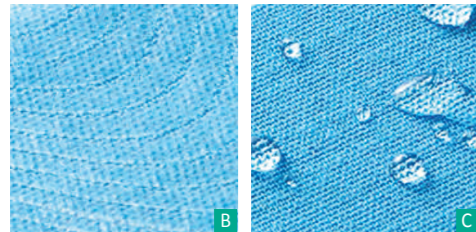

- Low back pain
- Abdominal muscle strain

## MAXTAPING™ マックステーピング

MAXTAPING™ is used in many fields, such as rehabilitation, health care, sports etc. It helps relieve pain, inflammation and supports weak tissues to help improve performance.  
MAXTAPING™ is made of 100% cotton without Latex or chemical additives. The thickness and weight of MAXTAPING™ make it feel like a second skin for maximum comfort. MAXTAPING™ is water resistant and can be used during any activity.  
The unique design of MAXTAPING™, when properly applied, results in skin lifting, increased circulation, improved metabolism, and pain/edema relief.

- A Made of 100% Cotton without latex or medication
- B Heat-activated acrylic glue forms ventilated pattern
- C Water resistant, long-lasting, and highly flexible
- D Helps maintain normal structural alignment, support weak muscles, and prevent injury

## マックステーピング A+ MAXTAPING™ A+

- A Specific 4-Arc application technique deeply massages stiff muscles to facilitate lymphatic flow, restoring muscles back to its original flexibility while reducing pain, edema and inflammation.
- B Multidirectional support and recoil force, improving joint stability and muscle function during motions.
- C 4-way stretch design for easy application on tender or rigid area.
- D 4-way stretch material allows tape to stretch in all directions without restricting muscle and joint movement, even throughout prolonged use.
- E Super lightweight, quick-drying cloth decreases the potential of skin irritation and provides greater breathability throughout prolonged use.

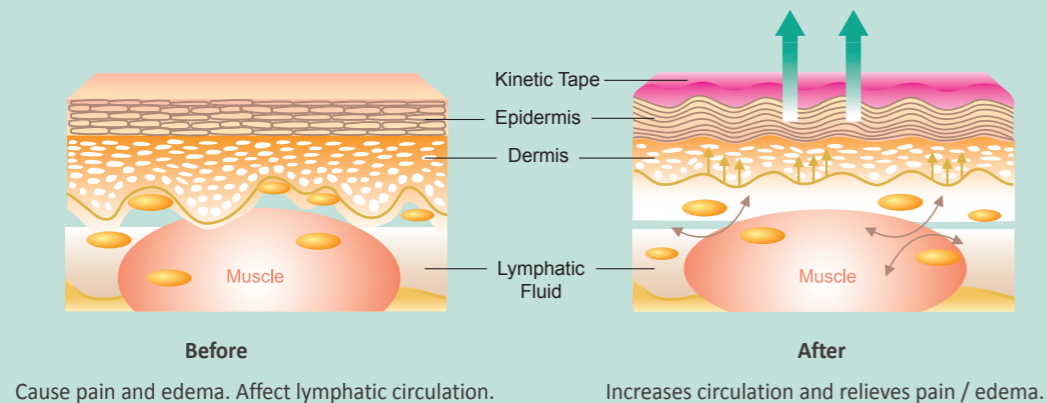

8095  
10 sheets / pack

8195  
10 packs / box

<b>Size</b>	<b>Color: Blue / Red / Beige</b>
S 14 cm 5.5 inches (For wrist/foot/ankle)	M 18 cm 7.0 inches (For elbow/shoulder/knee)
L 22 cm 8.7 inches (For neck/back/leg)	

### Mechanism

The inflamed muscles cause constriction of the blood vessels, reduction of lymphatic fluid while affecting muscle and joint mis-alignment. Thus, the body is incapable of functioning normally during daily activities or exercise when muscles become hard to extend or contract due to injuries.

The kinetic tape provides deep and concentrated massage therapy to damaged/adherent muscles and tissues when properly applied on the tender point. The kinetic tape improves lymphatic flow and circulation; facilitates lymphatic fluid into cells for nourishment and stimulates removal of metabolic waste effectively. The kinetic tape can relieve stiff, fibrous muscle and restore it back to its initial flexibility; toward normal range of motion. It helps reduce pain, edema and inflammation.
